

Palm Waxes

Bitter Creek Candle Supply, Inc.
www.bittercreek.com

Palm wax is 100% natural plant wax that is made from the tropical palm plant. A great natural alternative to soy and beeswax. It requires no additives! Comes in easy to measure granular form. These waxes make beautiful crystal effects in your candles! Easy to use & releases from molds wonderfully! Excellent clean burning qualities and color stability!

Tips For Use:

- ~ We recommend using chips, liquid, or powder dye with this wax. Other dyes may inhibit the crystalline appearance.
- ~ Add 4 - 6% fragrance by weight (overloading fragrance may affect the crystal appearance).
- ~ Pour at approx. 200°F degrees into pre-heated metal molds (seamless aluminum works best).
- ~ This wax generally requires a larger size wick than average. We recommend trying Square Braid, RRD, HTP, LX, Eco or CD wicks with this wax. Test burning will be necessary for proper wick selection.
- ~ To make sure there are no air pockets in the candles, poke a hole into the top surface as the candle solidifies. Re-pour to fill in the void until level.
- ~ Cool the candles very slowly, in an insulated box or Styrofoam cooler to keep them warm.

Please remember, these are only guidelines and individual results may vary. Experimentation and testing is always the best way to determine and develop the best methods for your application.

5601A – Feather Blend (Pillars & Votives) 138 Melt Point
