<p><b>Dual Display: Would you like to weigh in grams &amp; ounces/lbs.?</b> Your high quality scale weighs in both pounds and ounces, up to 13 lb. (208oz) in 1/10 oz. increments. <b>Example:</b> You can set your scale's display to read pounds and ounces (i.e. the display will read 2lb. 4oz. or 36oz.) Other scales may only read in ounces! Your scale will also weigh in both kilograms and grams, up to 6 kg. (6000g) in 1 gram increments. <b>Example:</b> You can set your scale's display to read kilograms and grams (i.e. the display will read 2kg. 30g or 2030g). Other scales may only read in grams! See the image on the right for some display examples.</p>	
---	---

## **Hold Function: Would you like to weigh larger items? Use the Hold feature!**

Hold function, which will hold your item's weight on the display until you clear it. This is an excellent feature for large products, which may block the LCD display. **Example:** You place your item on the scale, but now you can't see the display. That's ok, simply reach under the box and push the hold feature on your scale, then remove the item. The weight of your item will remain on the display.

## **Tare Feature: Would you like to weigh liquids or messy items? Use the Tare feature!**

Tare feature, which allows you to measure the weight of a product in a container. This is a tremendous feature if you need to weigh a liquid, soft, or a messy product. **Example:** Place a container on the scale, which will hold the liquid/messy product, then push the Tare button. Your scale will reset to 0 by subtracting the weight of the container. Now place the liquid/messy product in the container and your scale will display the actual weight of the product.

**Stainless Top & Sealed LCD Display & Buttons: Would like to clean your scale FAST & EASILY?** Simply remove the stainless steel top and wash it off (**not** dishwasher safe). Also your scale's buttons and LCD display are fully sealed to prevent damage to the sensitive electronics. This also makes your clean up simply and quick!
